**1 [Towards a temporal world-wide web: a transaction-time server](#)**

Curtis E. Dyreson

January 2001 **Proceedings of the 12th Australasian conference on Database technologies**

Full text available: pdf(588.30 KB)

[Publisher Site](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Transaction time is the time of a database transaction, i.e., an insertion, update, or deletion. A transaction-time database stores the transaction-time history of a database and supports transaction timeslice queries that retrieve past database states. This paper introduces transaction time to the World-wide Web. In a web context, transaction time is the modification time of a resource such as an XML document. A transaction-time web server archives resource versions and supports transaction tim ...

Relevance scale ☐ ☐ ☐ ☐ ☐**1 Session 12B: negotiation: A study on the termination of negotiation dialogues**

Paolo Torroni

July 2002 **Proceedings of the first international joint conference on Autonomous agents and multiagent systems: part 3**Full text available: [pdf\(173.90 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Dialogue represents a powerful means to solve problems using agents that have an explicit knowledge representation, and exhibit a goal-oriented behaviour. In recent years, computational logic gave a relevant contribution to the development of Multi-Agent Systems, showing that a logic-based formalism can be effectively used to model and implement the agent knowledge, reasoning, and interactions, and can be used to generate dialogues among agents and to prove properties such as termination and suc ...

**Keywords:** abduction, computational logic, dialogue, multi-agent systems, negotiation, termination

**2 Beneath the surface of organizational processes: a social representation framework for business process redesign**

Gary Katzenstein, F. Javier Lerch

October 2000 **ACM Transactions on Information Systems (TOIS)**, Volume 18 Issue 4Full text available: [pdf\(2.02 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#), [review](#)

This paper raises the question, "What is an effective representation framework for organizational process design?" By combining our knowledge of existing process models with data from a field study, the paper develops criteria for an effective process representation. Using these criteria and the case study, the paper integrates the process redesign and information system literatures to develop a representation framework that captures a process' social context. The paper argues t ...

**3 Invited paper: Middleware and web services for the collaborative information portal of NASA's Mars exploration rovers mission**

Elias Sinderson, Vish Magapu, Ronald Mak

October 2004 **Proceedings of the 5th ACM/IFIP/USENIX international conference on**

### Middleware

Full text available:  [pdf\(428.63 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

We describe the design and deployment of the middleware for the Collaborative Information Portal (CIP), a mission critical J2EE application developed for NASA's 2003 Mars Exploration Rover mission. CIP enabled mission personnel to access data and images sent back from Mars, staff and event schedules, broadcast messages and clocks displaying various Earth and Mars time zones. We developed the CIP middleware in less than two years time using cutting-edge technologies, including EJBs, servlets, JDB ...

#### 4 The application of computer simulation in a flight vehicle CAD system

Chunxi Wan

December 1987 **Proceedings of the 19th conference on Winter simulation**

Full text available:  [pdf\(416.84 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper describes an effort in applying computer simulation to the design of flight vehicle systems. The flight vehicle computer aided design (CAD) system is in itself a simulation of the designer's thinking processes. The system includes many modules to simulate the knowledge structure of a designer group. And it is possible to be adjusted and replenished in time just as in the case of human designers who have to do likely. It is able to input, output, store and generale information und ...

#### 5 Better than one operation per clock (panel): vectors, VLIW, and superscalar

Joseph A. Fisher, Greg Grohoski, Yale Pratt, J. E. Smith, David R. Stiles

May 1990 **ACM SIGARCH Computer Architecture News , Proceedings of the 17th annual international symposium on Computer Architecture**, Volume 18 Issue 3

Full text available:  [pdf\(59.52 KB\)](#) Additional Information: [full citation](#), [abstract](#)

In the 1980s, considerable advances were made in both software and hardware technology, and CPUs that can issue no more than one operation per clock cycle are rapidly approaching this barrier. Further improvements to uniprocessor performance can be obtained by enhancing the architecture of the CPU to allow multiple operations to be issued in a single clock cycle. The focus of this panel is to discuss three architectural approaches to issuing multiple operations per cycle: (i) vector instruc ...
